Acronyms and Definitions

Decentralization: *The process of distributing decision-making power from central authorities to more local entities or users within the network, particularly in blockchain systems.*

LOAS: *Pseudonym of the YouTube channel Les Occaz À Séb, the founder of the $WXYZ token.*

Token: *A digital token representing a unit of value issued on a blockchain (in this case, TonChain). Tokens can serve various purposes, such as transferring value or accessing specific services within an ecosystem.*

Tokenomics: *The study of the economic principles behind the creation, distribution, and management of tokens within a blockchain ecosystem.*

Veto: *The power to oppose a decision or proposal.*

$WXYZ: *Name of the token.*

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Chapter I] Introduction

Welcome to the world of $WXYZ, a token that transcends mere speculation to become the beating heart of a dynamic and innovative community.

$WXYZ is not just a simple token; it is an invitation to participate, create, and influence. The LOAS project is built on the fundamental principle of decentralization, where each token holder is not merely an investor but a key player in the development and future of $WXYZ.

1.1 - Your Invitation to Daily Challenges

At $WXYZ, we have launched a revolution: Weekly Challenges. Every week, a new adventure awaits you. Our inaugural challenge is: "The $WXYZ Market Challenge." We call on all our holders: "How can you make $WXYZ more than just a token? How can you make it indispensable in the real world?" Your ideas are not just welcome; they are crucial. By sharing your visions on our Telegram channel and on X with the hashtag #WXYZMarket, you are not just participating; you are shaping the future of our token.

1.2 - A Decentralized Token: Your Token

$WXYZ is designed to be a truly decentralized token. Unlike projects where control is centralized in the hands of a few, $WXYZ places power in the hands of its holders. Every member of our community, holding $WXYZ, has the opportunity to actively participate in challenges, propose ideas, and directly influence the path of our token. We believe that the value of $WXYZ relies far more on the engagement, innovation, and active participation of its holders than on mere scarcity or speculation.

By participating in the challenges, members not only earn recognition within our community but also have the opportunity to influence future decisions regarding $WXYZ.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Winning ideas are highlighted, discussed, and sometimes integrated into our roadmap,

thus demonstrating our commitment to decentralized governance where every voice matters.

$WXYZ is a decentralized token designed to engage the community

through weekly challenges.

Chapter II] The Tokenomics of $WXYZ – Technical Structure and Engagement

2.1 – Technical Foundations

The tokenomics of $WXYZ is built on a solid technical foundation and a community-centered approach.

This token was created on the TONcoin network via the Blum platform, with a fixed total supply of 1 billion tokens, ensuring scarcity and potential long-term value. However, this structure has certain important features and limitations to consider.

Firstly, the token is limited to the basic features of the TON network, and its metadata, such as the description and links (or rather their absence) to social networks, are immutable after its creation.

Moreover, all transactions related to this token must be exclusively conducted on the Blum platform, and it currently lacks any on-chain governance mechanism. However, listings are possible depending on the community's dynamics.

2.2 – Distribution and Metrics

The initial distribution of $WXYZ was carefully designed to promote strong decentralization. Upon its creation, $WXYZ was distributed fairly via the Blum platform, with 100% of the tokens in circulation.

What is held by the founder was in addition to the costs already incurred in the creation of the token. This was done to encourage the growth and promotion of the project without excessive centralization.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

On January 18, 2025, the initial market cap of the token was $2,500, and its unit price was $0.00000253. In terms of trading volume, it amounted to $31, with 5.76 TON distributed across 4 transactions. The target set for TON was 1,500, of which 0.38% has been achieved.

2.3 - Engagement and Value

Although $WXYZ does not have technical governance mechanisms, its value and utility rely on an innovative community engagement system. This system includes several key elements. Community members can participate in weekly challenges, propose and vote on community initiatives, and influence future decisions of the project.

Token holders also benefit from recognition and privileges based on their level of engagement. This creates an environment where the value of the token is generated not through complex technical mechanisms, but through the active engagement of the community.

2.3.1. Participation System

Active participation through challenges and discussions can lead to leadership roles within the community, such as temporary moderator or advisor on future $WXYZ initiatives, strengthening the sense of ownership and control among holders. The only limits are within the frameworks of security and applicable laws.

2.3.2. Creation of Value

The creation of value around $WXYZ relies on several levers: the development of community use-cases, the establishment of strategic partnerships, the organization of events and initiatives proposed by token holders, and the organic growth of the project, based on user engagement rather than speculation.

By focusing on engagement rather than the direct distribution of tokens, $WXYZ aims for organic growth.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Winning ideas from community challenges could lead to partnerships, events, or products where $WXYZ plays a central role, thus increasing its demand and value.

2.4 - Communication Channels and Governance

The governance of $WXYZ relies on several official channels. The Telegram chat allows for community discussions and proposals, while the Telegram channel is dedicated to official announcements.

Votes and social engagement take place on the X platform.

It is important to note that the founder's influence is limited to major structural decisions, ensuring more decentralized governance and active community participation.

2.5 - Development Perspectives

The future of $WXYZ relies on several growth axes. One aspect is the expansion of the active user base and the creation of concrete use cases proposed by the community.

On the other hand, strategic partnerships are being developed to increase the utility of the token.

It is also essential to maintain strong community governance, despite the technical limitations of the project.

2.6 - Security and Transparency

Transparency and security are priorities to ensure community trust. All transactions related to the token are public on the TON blockchain.

Major changes are announced in advance and documented.

The founder commits to keeping their holding under 10.0001%, and all community initiatives are archived to guarantee transparency.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Chapter III] Basic Rules

With the $WXYZ token, we place security and legality at the heart of our community. To ensure that every challenge and proposal is a positive and enriching experience, we have established immutable basic rules that guide all our activities.

- Security first: No challenge should encourage risky physical activities or behaviors that could endanger the health or safety of participants.

- Respect for legality: Challenges must be fully legal. Any proposal encouraging illegal actions will be rejected, even if they are trending.

- Respect for privacy: Challenges must not invade the privacy of participants or third parties.

- Transparency and reporting: Any concerns regarding the security or legality of a challenge can be reported via X (@WXYZ or @LesOccazASeb), where the community can also discuss and support the proposals.

3.1 - Proposal Rules and Challenge Selection on X

To simplify management and encourage participation, all challenges for $WXYZ must be proposed on X, with the handle (@WXYZ) and the parameters determined in the initial challenge and polls, which will have been conducted on the WXYZ Telegram channel. These parameters will replace the previous guidelines.

Here are the steps to propose a challenge:

1. Holding $WXYZ: The person must be a holder of $WXYZ.

2. Selection: The best challenge will be determined by its trend, which means the number of likes, retweets, and overall engagement it receives compared to other proposals.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

3. <u>Proof of Holding</u>: If the person gains approval for the challenge, they must prove their holding by sending a very small amount of $WXYZ (e.g., 1 $WXYZ or a fraction) to the founder's validation wallet.

    a) Wallet number: .

4. <u>Providing the Transaction ID</u>: The transaction ID must be privately provided to LOAS for validation.

5. <u>Announcement</u>: The selected challenge will be announced within 24 hours.

3.2 – Winning the Challenges

To win the challenges, one simply needs to be the most trending person in demonstrating the challenge. For example: eating a spoonful of cocoa powder blindfolded, without using hands; demonstrated through a video.

The conditions are provided by the person selected as the best challenge proposer.

The person who wins the challenge is not necessarily a holder of $WXYZ. This person will be highlighted by the token's accounts until the next winner.

Chapter IV] Process for Integrating Ideas into the WhitePaper

The $WXYZ community is at the heart of our development, and we firmly believe that the best ideas come from our members. This chapter outlines how ideas proposed by the community can be integrated into our WhitePaper, under the supervision of the founder, LOAS (Sebou63 on Blum).

4.1 - Contribution and Submission of Proposals

To strengthen the quality and engagement in the process of integrating ideas into the WhitePaper, several rules have been established. Only individuals who have financially contributed to the project, through participation in governance (see details 4.1.1), will be allowed to submit proposals. This approach was chosen to be accessible while ensuring that only serious and motivated proposals are submitted. This contribution also helps support the development and growth of $WXYZ.

4.1.1. Calculation of Participation

To ensure a fair and dynamic system, it has been decided to set this threshold based on a flexible calculation that evolves with the market capitalization and the token price. This approach helps maintain a balance between inclusivity and the importance of participation.

Calculation of the Governance Threshold

The governance threshold will be calculated based on a formula that incorporates both the market capitalization and the token price. This dynamic calculation ensures that the threshold remains relevant and adjusts according to the growth of $WXYZ, making participation accessible while maintaining the integrity of governance.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

The formula used to determine the number of tokens required to participate in governance is as follows:

- Number of tokens required = (governance threshold in $ / current token price in $) x market capitalization factor (%)

- Market capitalization (total value of tokens in circulation) = token price x total number of tokens

- Market capitalization factor (%) = (governance threshold / market capitalization) x 100

Examples of calculations:

Token Price = $0.00001   Total Number of Tokens = 1 billion   Desired Governance Threshold = $5 (for the example)
1. Market Capitalization = 0.00001 x 1,000,000,000 = $10,000
2. Market Capitalization Factor = 5 / 10,000 x 100 = 0.05%
3. Number of Tokens Required = (5 / 0.00001) x 0.05% = 250 $WXYZ

In other words, the governance threshold will be defined in TON, and the number of tokens required will depend on the current token price and the market capitalization factor. The latter can evolve, especially depending on the growth of the $WXYZ capitalization.

To illustrate this calculation, here are scenarios based on the evolution of the token price and the market capitalization factor:

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Example Calculation Scenarios

Scenario	Token Price	Governance Threshold	Capitalization Factor	Tokens Required
Low capitalization (0.1%)	0.00000251 $	5 $	0.1%	1,992,015
Moderate capitalization (0.5%)	0.1 $	5 $	0.5%	50,000
High capitalization (1%)	0.5 $	5 $	1%	10,000
Price drop to $0.00000200	1 $	5 $	0.8%	400,000

Transparency and Adaptability

To ensure total transparency, a detailed calculation rule will be made available at the time of listing $WXYZ. This will allow the community to monitor the evolution of the governance criterion and ensure that the process remains fair in response to market fluctuations.

We ensure that the governance threshold is set high enough to guarantee that engaged participants have a real impact, but not so high as to discourage users with a moderate investment. This flexibility will ensure that the governance of $WXYZ remains dynamic and inclusive in the long term.

4.2 - Evaluation and Selection of Proposals

All submitted proposals will be meticulously evaluated by the founder, and by the moderation team once it has been established. The evaluation will focus on the relevance, feasibility, and alignment of the ideas with the project's objectives.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Proposals that meet these criteria will be put to a community vote on the X platform, giving all members the opportunity to select the most promising ideas.

The authors of the selected proposals will benefit from increased visibility and will be highlighted in official announcements, thereby strengthening their position and influence within the community.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Chapter V] Powers and Limits of the Founder

Role of LOAS (Sebou63 or Séb from Les Occaz à Séb) in the White Paper

- Veto on Amendments: As the founder, LOAS has the exclusive veto power over any integration or modification of the White Paper. This power is used to ensure that each addition or change reflects the values and objectives of $WXYZ while maintaining the document's integrity and respecting the community's decision-making process.

- Integration Process: Ideas for the White Paper must be submitted via X with the hashtag #WXYZWhitePaper. LOAS will review each proposal to the best of his abilities to assess its relevance and alignment with the project.

- Announcements of Amendments: Any modification to the White Paper, even the smallest like moving a comma, will be subject to an official announcement on X and Telegram for transparency and to keep the community informed of developments.

5.1 - Holding

LOAS will not be allowed to hold more than 10.0001% of the token. In the event of transfers, donations, validations, or any other measures, he must return the excess to the market or dispose of it in any manner of his choosing, without disrupting the market.

In the case of offloading more than 1% of the token, LOAS must inform the community at least two months in advance, except for exceedances beyond the threshold (10.0001%).

5.2 - Partnerships and Other Value Creations

This will be at LOAS's discretion as long as it aligns with the goals, principles, and objectives of the token. Secrecy is sometimes necessary to build trustworthy projects and partnerships among the initiators.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Chapter VI] Benefits for Participants

Proposing ideas for the White Paper, challenges, or winning challenges offers several advantages:

- <u>Value Creation</u>: Integrated ideas can directly contribute to the value and future direction of $WXYZ, giving participants a sense of achievement and contribution.

- <u>Recognition</u>: Contributors will be credited in official announcements, enhancing their status within the community and allowing for the promotion of their own actions and commitments.

- <u>Influence</u>: By participating, you have a say in the project's direction, which is rare in traditional token ecosystems.

- <u>Community Engagement</u>: This encourages deeper engagement with the community, where relationships and collaborations can flourish.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

Chapter VII] Conclusion

There are thus several levels of participation: those who take on challenges and promote proposals (users), those who make proposals (leaders), those wishing to integrate new elements into the White Paper (governors), those communicating on networks and executing this document (moderators), and the person who created the token (founder).

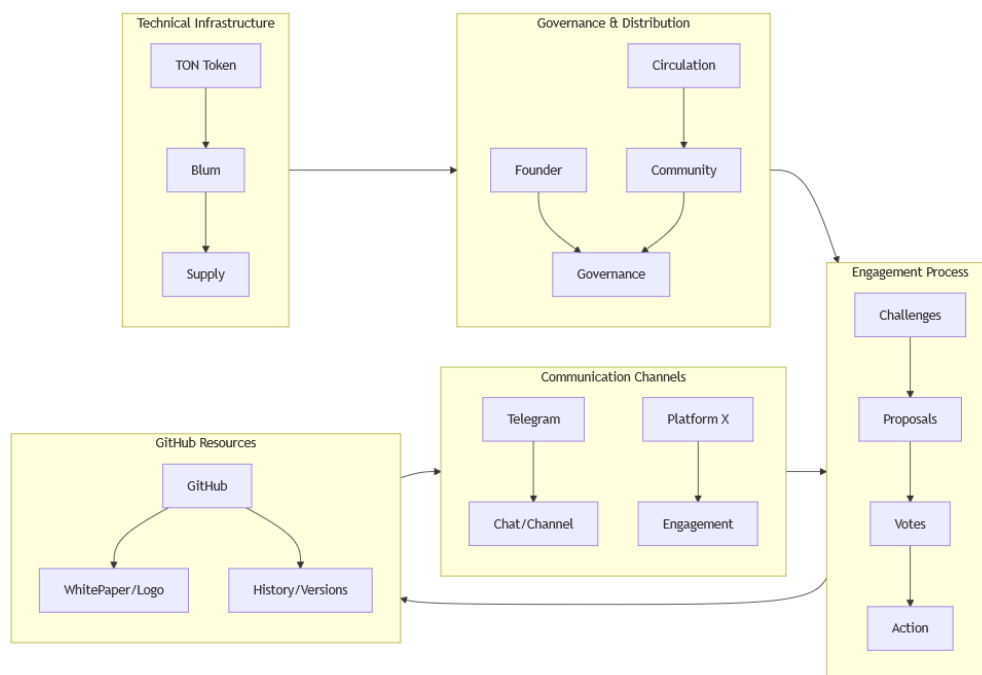

Figure 1 - Structural Organization of the $WXYZ Token

With $WXYZ, we are not just creating a token; we are building a community where every member is a key player in our story. Through weekly challenges, a tokenomics designed for engagement, and a transparent process for integrating ideas into our White Paper, we offer a unique experience where participation, creativity, and innovation are at the heart of everything.

By becoming a holder of $WXYZ, you are not just investing in a cryptocurrency project; you are joining an adventure where your voice matters, your engagement is rewarded, and together, we can redefine what it means to own a token. Join us in this participatory revolution, and let's make $WXYZ a symbol of community, innovation, and shared value.

Legal Annex

Investment in cryptocurrencies carries financial loss risks. The price of tokens can fluctuate significantly, and investors may lose their entire investment. This Whitepaper does not constitute an investment solicitation in any way, and investors are advised to conduct evaluations and seek financial advice before making any investment decisions.

This Whitepaper is not an offer to buy or sell financial securities. The $WXYZ tokens are a community engagement instrument and do not represent ownership rights or shares in the company. None of the information contained in this document should be interpreted as an encouragement to buy or sell tokens.

This project complies with the applicable laws and regulations regarding cryptocurrencies in the jurisdictions where it operates, including French regulations under the Pacte Law, the Monetary and Financial Code, and international regulations related to digital assets.

The protection of personal data for our users is a priority. Data collected through the use of services will be processed in accordance with the General Data Protection Regulation (GDPR). For more information, please refer to the privacy policy of our support publisher:

https://www.blum.io/privacy-policy

The $WXYZ project and its creators do not guarantee that the purchase of tokens will generate returns or profits. Users are responsible for their investment decisions and should consider the inherent risks of cryptocurrencies. The Whitepaper does not constitute financial advice.

The content of this Whitepaper, including texts, graphics, logos, and other elements, is protected by intellectual property rights and may not be reproduced, distributed, or used without prior permission from the authors. This is mentioned on the last page.

Disclaimer: This document will become active upon listing on an exchange. It serves as the cornerstone of our project.

The information contained in this Whitepaper is not intended for individuals residing in jurisdictions where the distribution or sale of tokens is prohibited. Please ensure that you comply with all local laws and regulations before investing in this project.

This Whitepaper is governed by French law. In case of a dispute, the competent courts will be those of Clermont-Ferrand.

By participating in this project, you agree to the terms and conditions outlined in this Whitepaper.
